

Company Summary

About the Company

Tellus Consulting LLC (hereafter referred to as Tellus), founded in March 2023, is a specialized consulting firm dedicated to geospatial analytics and data science. Our mission is to help companies and government agencies harness emerging technologies in analytics and artificial intelligence, driving improved operational efficiency, cost savings, and a competitive edge.

Core Services

• *Software Development*

- Data handling and preprocessing
- Format conversion
- Analysis and visualization solutions

• *ArcGIS Solutions*

- ArcGIS Python toolbox development
- Customized geoprocessing solutions
- Integrate ArcGIS with third-party data APIs

• *Web & Cloud Solutions*

- Web application development
- Google Earth Engine custom applications
- Cloud-based geospatial solutions

• *Advanced Analytics*

- Geospatial analytics
- Data science consulting
- Machine learning applications

Leadership

The company is led by Dr. Zhifei Dong, who brings over a decade of experience in geospatial analytics. Dr. Dong holds a Ph.D. in Ocean Engineering from University of Delaware and an M.S. in Information and Data Science from UC Berkeley. His notable achievements include being the first author of the Coastal Engineering Resilience Index (CERI) and an award-winning ArcGIS geoprocessing specialist. Dr. Dong possesses extensive technical expertise in ArcGIS, Python, scalable machine learning, cloud computing, and computer vision. Throughout his career, he has collaborated extensively with leading companies and government agencies, including Woolpert, Google, the U.S. Army Corps of Engineers, Environmental Protection Agency, among others.

Why Choose Tellus

Tellus blends cutting-edge technical expertise with practical applications, serving as a vital link between advanced geospatial technology and real-world solutions. With a focus on tailored strategies and comprehensive service offerings, we are the ideal partner for organizations looking to elevate their geospatial capabilities, analytics, and operational efficiency. Explore some of our key projects below.

1. ArcGIS/Python geoprocessing tool development for USACE JALBTCX center ([link](#))
2. ArcGIS/Python analysis and visualization tool development for USACE RSM program ([link](#))
3. ArcGIS/Python data-driven decision-making tool development for CPRA LASAAP program ([link](#))
4. Web application development for UC Berkeley capstone project ([link](#))
5. Machine learning on sentiment analysis of Google Maps Restaurant Reviews ([link](#))
6. Machine learning on land use and land cover classification using satellite imagery ([link](#))
